User is logged in and on home page

User clicks on map view

Location available?

No

Prompt for location access

Yes

Load Mapkit

Load Store Locations

Display Map View

This activity diagram depicts our Pet Friends map view use case which starts when an authenticated user clicks on the map view button, from there we check to see if the user had provided location permissions, if not, we ask for it again. From there, we load the store locations from the database and get the Mapkit base map. Finally, we display the map view to the user.
